THE COOKED WORKS

Cooked FX - 40 Game Effects (FREE)

Read me

What is inside

Package	Cooked FX - 40 Game Effects (FREE)
Files	693 effect sprite sheet files
Folders	*Clean_Paper*, *Cozy_Chunky*, *Flat_Night*, *Pixel*, *Soft_Glass*
Compatibility	Unity 2022.3 LTS or newer. Works in the Built-in, URP and HDRP render pipelines. No package dependencies.
Language	English documentation

40 effects in the five Softline themes (Soft Glass, Cozy Chunky, Clean Paper, Flat Night, Pixel): combat, magic, status loops, movement, pickup and UI, nature. 19 of them come in a **side** and a **top-down** version, blood in red, green and purple: 63 animations per theme. Colours, outlines and shadows use the Softline UI Kit tokens, so the effects sit naturally next to the kit, cards and bars.

Quick start

- Every effect is a horizontal **sprite sheet** (frames left to right, square cells). In Unity the sheets are already sliced into frames (*name_00, name_01, ...*).
- Add the **TCWFxPlayer** component to a GameObject with a *SpriteRenderer* or a UI *Image*, drag the frames of a sheet into **Frames** (or use the demo scene objects as prefabs). One-shot effects destroy or disable themselves at the end, loops keep playing.
- **Side / top**: effects with gravity or ground contact come twice: *_side* for side-view games (things arc, fall and land on the ground line) and *_top* for top-down games (things scatter radially and leave a mark on the floor). The others work in any view. Directional effects face right: rotate or flip them.
- *anims.json* in every theme folder lists frames, fps, cell size (1x), loop, view and facing for every sheet. Vector themes: PNG_1x = 128 px cells, PNG_2x = 256 px, 24 fps. Pixel: PNG_native = 32 px, PNG_1x = x4, PNG_2x = x8, 12 fps, Point filtering.

Other engines

The sheets are plain PNG strips. Godot: *SpriteFrames* > Add frames from sprite sheet (horizontal = frame count). GameMaker: import as a strip image. Unreal: Paper2D > Extract Sprites, then a Flipbook. Frame counts and fps are in *anims.json*.

License

See **LICENSE.pdf** in this folder. In short: unlimited personal and commercial projects, no resale or redistribution of the files themselves.
